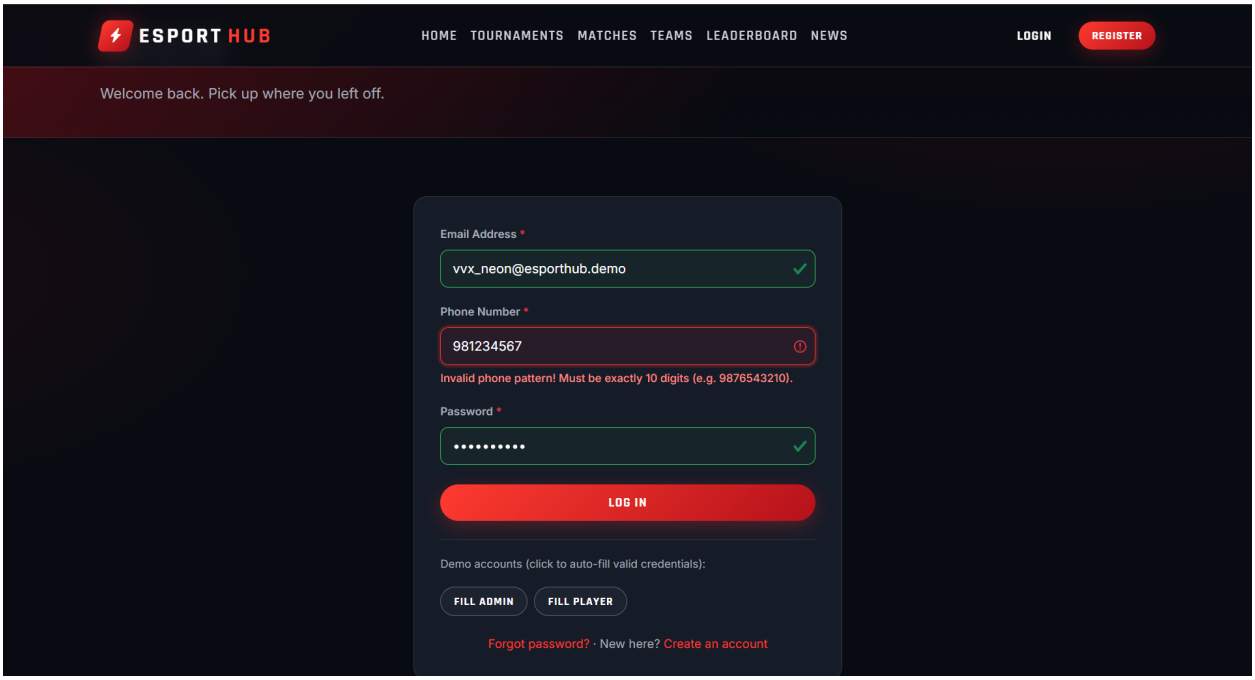

Fig 1.5 JS Validation: Phone number pattern

Code:

PART 1: LOGIN PAGE VALIDATION (Email + Phone + Password)

5 validations:

All fields required
Email Pattern
Phone Pattern (10 digits)
Password Length (min 8 chars)
Password Pattern (A-Z, a-z, 0-9, special char)

```
// ---------------------------------------------------------
// LOGIN VALIDATION SCRIPT
// ---------------------------------------------------------
const loginForm = document.getElementById("loginForm");
const loginEmail = document.getElementById("login-email");
const loginPhone = document.getElementById("login-phone");
const loginPass = document.getElementById("login-password");
const loginAlert = document.getElementById("login-alert");

const emailRegex = /^[a-zA-Z0-9._%+-]+@[a-zA-Z0-9.-]+\.[a-zA-Z]{2,}$/;
const phoneRegex = /^[0-9]{10}$/;
const passwordPattern = /^(?=.*[a-z])(?=.*[A-Z])(?=.*\d)(?=.*[!@#$%^&*()_+\-
=[\]{};':"\\|,.<>/?])/;

loginForm.addEventListener("submit", function (e) {
  e.preventDefault();

  const emailVal = loginEmail.value.trim();
  const phoneVal = loginPhone.value.trim();
  const passVal = loginPass.value;

  // Clear previous errors
  clearLoginErrors();

  // 1. All fields required
  if (!emailVal && !phoneVal && !passVal) {
    showLoginAlert("All fields are required! Please fill in all fields.");
    showError(loginEmail, "login-email-err", "Email is required.");
```

```
  showError(loginPhone, "login-phone-err", "Phone number is required.");
  showError(loginPass, "login-password-err", "Password is required.");
  return;
 }

 let isValid = true;

 // 2. Email Validation (Required + Pattern)
 if (!emailVal) {
  showError(loginEmail, "login-email-err", "Email is required.");
  isValid = false;
 } else if (!emailRegex.test(emailVal)) {
  showError(loginEmail, "login-email-err", "Invalid email pattern! Format must be:
user@domain.com");
  isValid = false;
 }

 // 3. Phone Validation (Required + 10 Digits)
 if (!phoneVal) {
  showError(loginPhone, "login-phone-err", "Phone number is required.");
  isValid = false;
 } else if (!phoneRegex.test(phoneVal)) {
  showError(loginPhone, "login-phone-err", "Invalid phone pattern! Must be exactly 10
digits (e.g. 9876543210).");
  isValid = false;
 }

 // 4. Password Validation (Required + Length + Complexity)
 if (!passVal) {
  showError(loginPass, "login-password-err", "Password is required.");
  isValid = false;
 } else if (passVal.length < 8) {
  showError(loginPass, "login-password-err", `Password length must be at least 8
characters (current: ${passVal.length}).`);
  isValid = false;
 } else if (!passwordPattern.test(passVal)) {
  showError(loginPass, "login-password-err", "Password pattern error! Must include
uppercase, lowercase, number & special symbol (!@#$%^&*).");
  isValid = false;
 }
```

```
  if (!isValid) {
    showLoginAlert("Validation Error: Please correct the highlighted errors.");
    return;
  }

  // Success
  alert("Login Validation Passed! Submitting credentials...");
});

function showError(inputEl, errId, message) {
  inputEl.classList.add("is-invalid");
  const errEl = document.getElementById(errId);
  if (errEl) {
    errEl.textContent = message;
    errEl.style.display = "block";
  }
}

function showLoginAlert(msg) {
  loginAlert.textContent = msg;
  loginAlert.style.display = "block";
}

function clearLoginErrors() {
  loginAlert.style.display = "none";
  [loginEmail, loginPhone, loginPass].forEach((el) => el.classList.remove("is-invalid"));
  document.querySelectorAll("#loginForm .invalid-feedback").forEach((el) => {
    el.textContent = "";
    el.style.display = "none";
  });
}
```

PART 2: REGISTER PAGE VALIDATION (Name + Email + Phone + Password + Confirm Password)

6 validations:

Full Name required
All fields required
Email Pattern
Phone Pattern (10 digits)
Password Length (min 8 chars) & Password Pattern
Confirm Password Match (Password === Confirm Password)

```
// ------------------------------------------------------------
// REGISTER VALIDATION SCRIPT
// ------------------------------------------------------------
const registerForm = document.getElementById("registerForm");
const regName = document.getElementById("reg-name");
const regEmail = document.getElementById("reg-email");
const regPhone = document.getElementById("reg-phone");
const regPass = document.getElementById("reg-password");
const regPass2 = document.getElementById("reg-pass2");
const regAlert = document.getElementById("reg-alert");

const emailPattern = /^[a-zA-Z0-9._%+-]+@[a-zA-Z0-9.-]+\.[a-zA-Z]{2,}$/;
const phonePattern = /^[0-9]{10}$/;
const passPattern = /^(?=.*[a-z])(?=.*[A-Z])(?=.*\d)(?=.*[!@#$%^&*()_+\-
=[\]{};':"\\|,.<>/?])/;

registerForm.addEventListener("submit", function (e) {
  e.preventDefault();

  const nameVal = regName.value.trim();
  const emailVal = regEmail.value.trim();
  const phoneVal = regPhone.value.trim();
  const passVal = regPass.value;
  const pass2Val = regPass2.value;

  // Clear previous errors
```

```
 clearRegisterErrors();

 // 1. All fields required
